DETAILED ACTION

Allowable Subject Matter

Claims 1-9 and 13-19 are allowed.

Regarding independent claims 1, 5, 9, 13 and 15, the closest prior art to the instant invention is Schimke (USP 5,286,143). SCHIMKE teaches an insert body supporting a drill point for rotation in a cutting direction about a rotational axis, said drill point comprising: a chisel edge (58), a pair of linear cutting edge (34) inclined at an angle relative to said rotational axis, said cutting edge formed at an intersection of a substantially planar first flute surface, wherein said chisel edge and cutting edges are centered on said rotational axis (see figures 10-13).

However, regarding independent claims 1, 5, 9, 13 and 15, SCHIMKE fails to anticipate or make obvious the insert body having a conical land surface (whereby said cutting edge is formed at an intersection of said planar first flute and a conical land surface). Furthermore, regarding claims 1, 13, 15, SCHIMKE fails to anticipate or make obvious the conical land surface having an axis of curvature offset relative to the rotational axis.
